

TimTec LLC is a privately held company located in Tampa, Florida. It was founded in 1995 Newark, Delaware to begin its work in the areas of acquisition and distribution of synthetic organic and natural compounds, custom synthesis, scientific software and laboratory equipment to become a full-service partner for drug discovery. TimTec has developed strong in-house expertise in the design of screening products to offer a full line of libraries and compound sets of various specialization for different assays. In addition, the company provides compound management, custom formatting and computational services. TimTec LLC is a US veteran and a woman owned business.

Tremendous growth opportunities in the field

of biological screening prompted us to establish operations in Europe and the United States. In 1993, due to the increased demand for diversified organic compounds, we incorporated in Delaware, opened an office, and established a presence in the U.S. market. TimTec then began its work in the areas of acquisition and distribution of synthetic organic and natural compounds, custom synthesis, custom weighing and microplate preparation, and quality control including NMR analysis. Our 30,000 square foot facility has a state-of-the-art synthetic lab for mg/g/kg scale production, analytical lab, and cold storage rooms.

Our Philosophy and Vision

From the very beginning, TimTec started with a purpose, a mission: to serve current chemistry needs of research and development community in life-science industry.

TimTec is ever aware that a molecule one day becomes a solution, a cure, an essential component to keeping, improving, or making a life system healthy. The appreciation of this possibility is a core value at TimTec.

TimTec seeks to anticipate the current trends to serve its customers. The company molecular chemistry solutions continue to support present day challenges in search for the cure for the most prevalent and the most rare diseases while embracing new technologies. Flexibility and adaptability has been the driving force for the many successful changes in TimTec throughout

the years and is another core value of the TimTec business model.

TimTec is a world community of chemistry specialists. As chemists we delight in discovering, creating, finding, and collecting novel, high-quality molecules. Maximum chemical diversity has always been considered an essential goal in addressing equally diverse research needs.

Company History

Early 90s	Zelinsky Institute of organic chemistry introduces compound offerings worldwide
1993	Zelinsky Inc shifts operations to United States to centralize customer outreach
1995	Physical facility requirements emerge and TimTec is established in Delaware
1995	www.TimTec.net is launched
1995	ActiMol library is created and further developed through cherry picking of open literature
1996	Transitory period of the company changing operations from distribution to manufacturing
1997	Compound transfer services are added
1997	Compound Database management software increases company's performance and efficiency
1998	R&D, Custom Synthesis and Analytical services are offered as part of a joint venture
1998	TimTec moves to a larger facility to accommodate the growing demand of services
1999	Natural Products become a major focus - these libraries continue to grow through literature
1999	Liquid handling robotics become part of TimTec's laboratory to meet the increasing demand
2000	First Diversity Set Library Created
2000	Full service lab expanded
2001	Plant extracts are offered through TimTec
2003	ChemDBsoft V2 introduces new features, speed, stability and usability
2004	TimTec Biomol collaboration results in MaxiVerse™ chemical diversity library
2004	www.BuyReagents.com launched

2004	www.ChemDBsoft.com	launched
2005	MolPro	package is released - logp, logd, logs, pka, fa, diversity and similar
2005	Successful collaboration with SIAL	Natural Products Library
2005		
Moved to current facility, to accomodate the growing need for space. Lab & Storage expanded.		
2006	Privileged Structures	Focused Library assembled
	Targeted library	series expanded
	Natural Products	& Derivatives Libraries expanded
2009	www.ActiMol.com	launched
2009	Flavonoid Library	assembled
	Template-based	Library created
	Targeted library series Apoptosis	added
2009	Fragment Based Library	(FBL) Library created
2010	ChemDBsoft	V3 released. Compatibility and Speed are vastly improved
2010	TimTec	eChemStore online compound catalog created; Cu
2010	Targeted library series Apoptosis	added
Launching	TimTec Russia	site to promote collaboration with CIS and Asia
2011	Launching of MyriaScreen II	in Collaboration with Sigma Aldrich
Starting participation in	SIAL AMS	
2012	eChemStore	online catalog expanded to 680,000 compounds
Introducing	Chem-TCM	, phytochemical database of molecules found in plants used in the t
